Current Equipment Type

TYPE ECC84
MINIATURE
HIGH SLOPE
DOUBLE TRIODE

The BRIMAR ECC84 consists of two separate high slope triode units designed for use in VHF cascode amplifiers. Normally, triode 1 is operated as a grounded cathode stage directly coupled to triode 2 which is connected as a grounded grid stage. This gives a low noise input amplifier for use in television receivers for Band III. The shield connected to the grid of triode 2 keeps coupling between the two units to a minimum.
