Basing  9Y
Cap  Skirted Miniature, Cl-2 or Cl-33
Cathode  Coated Filament
Mounting Position  Any

ELECTRICAL DATA

FILAMENT CHARACTERISTICS AND RATINGS

Average Characteristics
Filament Voltage\textsuperscript{2}  2.1 Volts
Filament Current  275 Ma
Ratings (Design Maximum Values)\textsuperscript{3}  Min.  Max.
Filament Voltage\textsuperscript{4}  1.75  2.45 Volts

DIRECT INTERELECTRODE CAPACITANCES (APPROX.)

Plate To All (p to f+is)  1.1 pf

AVERAGE CHARACTERISTICS

Tube Drop (Approx.) With 7 Ma Plate Current  70 Volts

RATINGS - FLYBACK VOLTAGE RECTIFIER\textsuperscript{3,5}

Inverse Plate Voltage
Total DC and Peak  22 KV Max.
DC  18 KV Max.
Peak Plate Current  45 Ma Max.
Average Plate Current  0.5 Ma Max.

NOTES:

1. Socket terminals 3 and 7 may be used as tie points for component at or near filament potential.

2. The equipment shall be so designed that the filament voltage is centered at the specified value.

3. Design Maximum Ratings are limiting values of operating and environmental conditions applicable to a bogey electron tube of a specified type as defined by its published data, and should not be exceeded under the worst probable conditions.

from JEDEC release #4794, Sept.7, 1964

QUICK REFERENCE DATA

The Sylvania Type 2AZ2 is a miniature filament type diode designed for use as a high voltage rectifier in television receivers and other high voltage rectifier applications. It is applicable for use in both flyback and RF types of supplies as well as for use at power line frequency.
NOTES: (Cont'd.)

3. (Cont'd.)
The tube manufacturer chooses these values to provide acceptable serviceability of the tube, making allowance for the effects of changes in operating conditions due to variations in the characteristics of the tube under consideration.

The equipment manufacturer should design so that initially and throughout life no design maximum value for the intended service is exceeded with a bogey tube under the worst probable operating conditions with respect to supply voltage variation, equipment component variation, equipment control adjustment, load variation, signal variation, environmental conditions, and variation in the characteristics of all other electron devices in the equipment.

4. Filament supply variations shall be restricted to maintain filament voltage within the specified values.

5. For operation in a 525 line, 30 frame system as described in Standards of Good Engineering Practice of Television Broadcasting Stations. Federal Communications Commission. The duty cycle of the voltage pulse is not to exceed 15% of a scanning cycle.

This tube may produce soft X-rays which can constitute a health hazard unless adequately shielded.
